

Letter of recommendation for local IBEW 400

Mr. Peterson and Mr. Shimko,

It was my pleasure to have your local 400 working on my 1.7 Megawatt solar carport project for Verizon in Freehold NJ. We began work mid-November and ramped up further during the first week of December 2014. In a little over seven weeks, the IBEW was able to substantially complete, test and install 1.7 Megawatts of solar renewable energy for Sunpower and Verizon without any delays, injuries or setbacks.

Over the past two months I've asked the workforce to work ten hours a day, all weekends and holidays all while encountering extremely cold weather conditions throughout January and December. Still everyone showed up for work every day ready to go and were punctual, professional, outfitted for their tasks and very polite. My customer is also very pleased with the results and appreciates your attention to detail.

I would also like to highlight the work of Glen Spratford and John Alberti. Both individuals were key role players in our success on this project and their experience showed through their leadership skills, knowledge of construction and attention to quality throughout the project. With an aggressive construction schedule in front of them, Glen and John kept their electrical crews in check and made sure safety, quality and IBEW standards were met 99% of the time. Coordination in the field was top priority as we had over 40 men on site with 25+ aerial lifts performing multiple operations at any given time. Overall I am very impressed with their attitude and willingness to get the job done under any and all circumstances.

Thank you again and I look forward to working with you in the future.

Cheers,

-William Bray
